

Help prepare your business today with Electrostatic Disinfectant Service

Put your customers and employees at ease with the Electrostatic Disinfectant Service from Cintas. This on-site service consists of the electrostatic application of a broad-spectrum disinfectant that is effective against a broad range of microorganisms on applied surfaces and touchpoints.

The Electrostatic Disinfectant Service utilizes electrostatic technology to create a magnetically charged spray that helps provide greater surface coverage on the surfaces you choose.

CINTAS Electrostatic Disinfectant Service

- An electrostatic sprayer is used to help coat hidden and hard to reach surfaces by creating a magnetically charged disinfectant spray that seeks out and wraps around applied surfaces
- The service uses PurTabs Effervescent Disinfection Tablets, which are designed to provide effective cleaning and disinfection in areas where it is important to control the hazard of cross-contamination on applied pre-cleaned, hard non-porous surfaces
- Kills 99.9% of bacteria
- **On-site service visits** are scheduled on a regular basis
